

CareerPilot AI

Phase 31.1 completion evidence

COMPLETED — AUTOMATED AND UI ACCEPTANCE PASSED

The Phase 31.1 foundation is fully implemented, tested, visually reviewed and running in the live preview. No Phase 31.2 functionality was started early.

Completion date	23 September 2026 · Asia/Calcutta
Workspace	/home/user/careerpilot
Automated evidence	docs/evidence/31.1/20260921T235123Z/phase-gate.log
UI evidence	docs/evidence/31.1/20260921T235123Z/ui-review/

1. Completed foundation

A reproducible pnpm/Turborepo monorepo now contains the Next.js web shell, FastAPI API shell, shared TypeScript contracts, responsive design-token UI, test gates, configuration validation and CI/security checks.

Web	Next.js App Router production build, responsive homepage, health route, loading/error/not-found states and same-origin API rewrite.
API	Liveness, versioned health, readiness and safe configuration endpoints with explicit CORS.
Configuration	Validated environments and origins; Supabase and AI statuses only; no credential values returned.
Testing	Vitest, 6 API tests, Ruff, Playwright desktop/mobile smoke tests and E2E typecheck.
CI/security	Frozen-lockfile install, Gitleaks secret scanning and GitHub dependency review configured.

2. Gate results

Frozen-lockfile install	PASS
Web lint and typecheck	PASS
Web unit test	PASS — 1 test
Production build	PASS
Playwright smoke	PASS — desktop and Pixel 5 mobile profiles
API checks	PASS — Ruff and 6 tests
Live endpoint checks	PASS — API, web and same-origin proxy

3. UI acceptance review

The final production preview was visually reviewed at 1440 × 1000 and 390 × 844. Both layouts were rendered successfully with no observed clipping or horizontal overflow. The review covered navigation, hero, health card, metrics, feature cards, roadmap, footer and responsive stacking.

Desktop evidence	docs/evidence/31.1/20260921T235123Z/ui-review/desktop.png
Mobile evidence	docs/evidence/31.1/20260921T235123Z/ui-review/mobile.png
Interaction	Check live connection changed the card to API ONLINE / Live and displayed the FastAPI service timestamp.
Preview	CareerPilot Website is running in the live preview; CareerPilot API is running on port 8000.

4. Verified operational contracts

GET /health, GET /api/v1/health, GET /ready, GET /api/v1/readiness, GET /api/v1/configuration, GET /api/health, GET /api/backend/health and GET /api/backend/ready were verified. The safe configuration response contains status metadata only and does not expose Supabase or AI credentials.

5. Locked scope boundary

Authentication, passkeys/MFA, real Supabase credentials, personal user data, resume uploads, production AI inference, billing, job scraping, automatic applications and production deployment remain deferred to later locked phases.

Completion decision: Phase 31.1 is complete. Phase 31.2 may begin only as the next numbered phase and must pass its own implementation, test and review gate.
